Subject: Application for the Fullstack Software Engineer Position – Dataiku Cloud

Dear Hiring Manager,

I am excited to apply for the Fullstack Software Engineer position at Dataiku Cloud. With over 20 years of experience in IT—combining technical expertise, project management, and a passion for data—I am eager to bring my skills to your innovative team.

As a certified Dataiku ML Practitioner, I recently completed a project involving API-based data extraction and machine learning with Dataiku, covering dataset ingestion, feature engineering, and model deployment. My proficiency in Python, SQL, Snowflake, DBT, and Power BI enables me to tackle both technical and analytical challenges effectively.

As Tech Lead Data at Saint Gobain Distribution France, I led cloud migration projects to Azure, optimized production environments, and automated technical procedures, significantly reducing performance incidents and improving user adoption. My experience includes managing a team of six, overseeing Agile projects, and planning capacity, all of which align with the demands of this role.

During my time at Cabestan and Strategy, I designed technical solutions for premium clients (e.g., Michelin, Société Générale), developed KPIs and decision-making dashboards, and trained teams on data tools. My customer-centric approach and leadership skills have been recognized for enhancing user satisfaction and autonomy.

Passionate about cloud technologies and data workflows, I am also skilled in AWS, Azure, REST APIs, and CI/CD best practices. My hybrid profile—spanning development, analysis, and application governance—fits seamlessly with Dataiku's technical and collaborative culture.

I would welcome the opportunity to discuss how my background can contribute to your projects, whether on-site or remotely. Available immediately, I am eager to bring my expertise to your team.

Thank you for your time and consideration. I look forward to the possibility of an interview.

Best regards,
Piotr Grudzinski
